IET Wallets

by Laurence Green

vesper.porta@gmail.com

Plié Meetings are used as incoming task tracking from team and a banks account, completed tasks are entered into a ledger book for incoming.

Fouetté Meetings are used to handle outgoing tasks to people from banked tasks. All Tasks allocated must be accounted for in a departments outgoing ledger book.

Double Entry Ledgers are expected for account tracking to ensure validity of a currency is being managed with full efficiency.

Small change is expected to be carried in a wallet of an employee at any time, checkups can supply opportunity to hand in tasks but a maximum of three tasks per wallet at any time is ideal.

Outgoing

Person / Account	Task ID	Task Family Sum

Incoming

Person / Account	Task ID	Task Family Sum

Task Family Sum

Odd and even values are inherently derived from mathematical formulae as 2n+1 and 3squrt/time, by using calculations to find language to describe total sums of a companies account a first glance must check for odd or even evaluation.

Either tally of tasks remaining or tally of currency generated in current dance of working.

Task Trinity

A department should keep books for direct exchange of task outbound in order to create a third account of personal team value upon currency generation has been conducted from their efforts.

Task Star

Currency generation requires accounts of tasks and currencies to be kept to track value of parts and total money being generated. Providing the company keeps track of language being used quality assurance of language tasks can validate against a quartet for direction navigation to facilitate expansion and breadth of expressiveness.

By using a language as a recall for memory direction of thought defines a language as self growing by actions of thought as memory of itself.

Using tasks as memory locations within a company a programme capable of expressing navigation to and from a task defines its own memory through language creation of action.

Creating language itself becomes aa spirit of a company, capable of itself to interact with others in verbose readable formats while specific to industry magical programming is breed-able by genetics.

Creation of a company genetics is foundational in programming a child into self automation to be born in health with an already running industry from mother business to create a world of its own.

Complexity by testing businesses outside of self is a harsh consideration and one managed by ordering concepts from plant life with leaves to animals and children .

Operating with a single language to define function as key internal dialogue public legal dialogue is required to validate each other and their actions within a world.
