IET Currency by Laurence Green

Total Sum example of currency															External double ledger currency														
Currency type															Receipt of completed task														
Material															Material														
Format of currency description of receipt.															Underwriter signing off on release of currency.														
Description of tests conducted in environments.															Next steps required for continuation.														
Learnt needs from performing tasks.															Break of relationship confirmation.														
Value of completed management of IET in suit.															Value of completed management of IET in suit.														
Radio																													
Transmission details of paid value to a department.																													
Breakdown of payment options and benefits.															Management, testing, and release all validated to release of a product requiring a value of currency given in receipt of goods from a department.														
															A department can track their needs of power consumption with their income from number of tasks being completed of specific currency values allocated. Increases of severity has real consequences against management to provide turn around of a task while planning from performances during seasons provides extreme accuracy in number of employees within a department.														
															Due to different currencies being used between financial office and a technical team a financial officer can be brought in-department securing methods of management away from centralisation.														
															Flight prices internal to a department can be managed according to seasonal effects of work allowing peak rates of holidays being bought internally from department management of itself as real value.														
															Illness or sick leave is paid for from a departments pool of talent allowing for their absence to be made up by paying off through internal currency to department in receipt with legal normalities.														
															Exchange rates from an employee and between employees to department currency are banned by contract due to effort and trust in an employee working well within their team and their trust in management.														
															Childcare and social upkeep for a person can be provided as long as subscriptions to their value in office are maintained by their credit rating internal to a department.														
															Tasks out of work can be supplied as a currency of itself indicating total health of a population while involving others into department social occasions, increasing overall happiness by a workers personal worth.														

Mental Disease and Infidelity

Individual Employee										Business 2 Business									
Tracking an employees process of managing themselves in work and outside balance for changes can complete healthy relationships and track lacking involvement.										Detection of external influences are capable of being measured by an external company by looking through finances alone allowing fresh business insight for organisation optimisations.									
Tracking of poor performances supplies ability to shed weight from a department easily through an employees visual feedback of own progress as a daily account of their internal accounts.										Invoices and goods control are validated by instant returns of receipts, expectations for impact can adjust financial direction.									
Cultural maintenance is enabled valued to health of a department in retention for in headquarter or office attendance increasing.										Department 2 Department									
Depression of an employee can be detected from their personal desire to increase their departmental wealth, reliance on personally tasked distractions count against an individuals involvement with departments main story.										Forming distance between departmental frictions relations can be secured by renting employees cross department or in lending for ad-hoc expansion.									
Psychologists or other mental professional can be used as selective assistance to employees of value declining in performance, stress, schizophrenia, bipolar, and anxiety can be prevented before outbursts at work or at home.										Supplement lifestyle from financial umbrellas is mitigated to be distributed personal umbrellas balancing need versus currency results with exchange rates.									
Segregation from home and work is supplied with separation of relationship formats as comfort at home and exciting alien at work. Potential to extend tasking at home on request can support emotional attachment to others around a character.										Genetic 2 Fertility									
Valuing a holiday as receipted to completed with emotional currency expectations of personal re-integrations can value spread through a company.										Purposeful exclusion of self from an adult environment and seclusion to foster elements of stress, schizophrenia, bipolar, and anxiety directly indicates genetic disorders of Downes Syndrome allowing for any support needed of a person to be detected early.									
Disease control of mental illnesses can be tracked from tasks allocated from other departments allowing a full analysis of a companies health by heat and pressure.										Aggression against systems like Infidelity Economic Tasking or management directly calculated from their performance and documentation supports mental incapacibilities of an individual to work supplying effective treatment or change can be arranged.									

IET Communications

Legal definition of a task must be defined as an addressing reference to contracted expectations of communications: To and From both defined as a state of two addresses to comply within agreements. Micro-contracts can be drawn up ad-hoc to hire a company or individual for work with assurance validation checks are managed by recipient and sender.

Contract to Start Work

Material

Fibonacci numbers as art

Literature as programming numbers

Split of work types into contractual portions is a must separating concerns of working points to finish.

Splits of a task should be possible as a recipient can create their own internal tasks to handle load while the sent communications is only accepted as a task on notified receipt and confirmation of desire to work on task supplied. Negotiations of loads and energy capable for a department is given grace of communications to cancel and resupply a groomed task for contract.

Mitigation of the greedy little snake salesmen wanting to task everyone with something for cheap requests from alarm and trigger services can be supplied from B2B or D2D services to bring detection of a greasy negotiation evaluating known interactions of a From. Reaction from these services can satisfy two points of submitting social bugs and invalidating working contracts internally.

Social meetings surrounding conditions of a task are a location based event and needs to have all connected allocated a place (time is irrelevant to a task). Organisation of tasks is actions performed to break point of a task until another can be satisfied, a place as a locational address for each task must be assigned within department to ensure rot of tasks occur by their environment conditions.

Encryption of a task being broadcast is important and must be transferred and stored in an encrypted state assuring time per task is required to decrypt on individual basis. Storing structured data is offensive to encryption managing a task to be a section of data once read destroyable when unauthorised access is detected.

Gravity of a task is the pool of task portions, balancing production of portions sustains a total gravity pull for a single task. G factors can be recorded to understand a companies search in desire of itself in completing tasks.

Format of a task submission is only ever a title of identification (internal system idents are hidden) and a material action required lending to basic email communications being valid as content itself. Validation of encryption must be energised through ease of decryption and readability to understanding, language or omission of sustained conversation all communications are ceased.

Gender and orientation of messaging is an encryption of itself, by monitoring properties of tasks deemed fitting for communications a transparency must be defined from external sources to satisfy lesbian cool interactions while not imposing or bullying a department into reaction from aggressive communications.

Encoding interactions as emotional forward and backward motions of self enables a task to be actioned by a team while allowing a personal reverse communications to be conducted presented. Environmentally aware of etiquette encryption on a per department currency models of interaction define languages to efficient operations of inclusion or exclusion.

Mathematical music defining iconography and content at the same time encrypts a task into a state of representation tangible for a human or cybernetic to understand.

By correct arrangement to organise completed tasks into a reproduction of colour based tiles to create currency as a pectoral representation with encryption itself a value of valid currency is self created within a company and department.

By performing automation to understand a task to be art visual pickup and arrangement of effects from tasks can create a mosaic of effort and encryption of itself.

With each tile (task) encrypted viewing content is only ever the top four colours indicating emotional response from a task itself while arranged with others logical manoeuvring of tasks defines location of a tile within a mosaic requiring an address internally.
